Data description

Abstract

Species composition of the herb and tree layer was recorded and cover of each species estimated. Parameter, Attribute list: cover, species. Dataset created by IMPETUS subproject A3.

No information about Data Lineage; No information about Data Consistency; No information about Data Completeness; Positional Accuracy: Position was measured by a gps; No information about Quantitative Attribute Accuracy

Observing strategy

Species data of herb and tree layer are necessary in order characterise the seven dominant vegetation types and to analyse for differences between the vegetation types. Species composition of the herb layer is also relevant as base for grazing quality. Tree species composition is especially important for silvicultural interest.
